NumPy Exercises

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

Import NumPy as np

```
In [1]: 1 import numpy as np
```

Create an array of 10 zeros

```
Out[2]: array([0., 0., 0., 0., 0., 0., 0., 0., 0., 0.])
```

Create an array of 10 ones

```
In [3]: 1 arr = np.ones(10)
2 arr
```

```
Out[3]: array([1., 1., 1., 1., 1., 1., 1., 1., 1.])
```

Create an array of 10 fives

```
Out[4]: array([5, 5, 5, 5, 5, 5, 5, 5, 5])
```

Create an array of the integers from 10 to 50

```
In [5]: 1 arr = np.arange(10,51)
2 arr
```

```
Out[5]: array([10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50])
```

Create an array of all the even integers from 10 to 50

```
Out[6]: array([10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, 50])
```

Create a 3x3 matrix with values ranging from 0 to 8

Create a 3x3 identity matrix

Use NumPy to generate a random number between 0 and 1

Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution

Create the following matrix:

Create an array of 20 linearly spaced points between 0 and 1:

Numpy Indexing and Selection

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```
In [15]:
              mat = np.arange(1,26).reshape(5,5)
           2
             mat
Out[15]: array([[ 1, 2, 3, 4,
                                  5],
                [6, 7, 8, 9, 10],
                [11, 12, 13, 14, 15],
                [16, 17, 18, 19, 20],
                [21, 22, 23, 24, 25]])
 In [0]:
           1 # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
           2 # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
           3 # BE ABLE TO SEE THE OUTPUT ANY MORE
In [16]:
           1 mat = np.arange(12,26)
           2 mask = (mat!= 16)&(mat!= 21)
             matrix = mat[mask].reshape(3,4)
             matrix
           5
Out[16]: array([[12, 13, 14, 15],
                [17, 18, 19, 20],
                [22, 23, 24, 25]])
 In [0]:
           1 # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
           2 # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
           3 # BE ABLE TO SEE THE OUTPUT ANY MORE
In [19]:
           1 | matrix[1:2,3:4]
             matrix[1,3]
Out[19]: 20
           1 | # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
 In [0]:
           2 # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
           3 # BE ABLE TO SEE THE OUTPUT ANY MORE
In [20]:
           1 | mat = np.arange(1,26).reshape(5,5)
           2
           3 mat[0:3,1:2]
Out[20]: array([[ 2],
                [7],
                [12]])
```

```
In [0]:
           1 # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
           2 # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
           3 # BE ABLE TO SEE THE OUTPUT ANY MORE
In [21]:
           1 mat = np.arange(1,26).reshape(5,5)
           3 mat[4:5,0:5]
Out[21]: array([[21, 22, 23, 24, 25]])
           1 # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
 In [0]:
           2 # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
           3 # BE ABLE TO SEE THE OUTPUT ANY MORE
In [22]:
           1 mat[3:5,0:5]
Out[22]: array([[16, 17, 18, 19, 20],
                [21, 22, 23, 24, 25]])
```

Now do the following

Get the sum of all the values in mat

Out[23]: 325

Get the standard deviation of the values in mat

Out[24]: 7.211102550927978

Get the sum of all the columns in mat

Out[25]: array([55, 60, 65, 70, 75])

Type *Markdown* and LaTeX: α^2
